

# WISCONSIN RADON MITIGATION CONTRACTOR PROFICIENCY LIST SEPTEMBER, 2006

There are no State of Wisconsin regulations specifically for radon businesses.

The proficiency list below is combined from two national certifying organizations whose web sites carry the most up-to-date information:

National Environmental Health Association - Radon Proficiency Program, [www.radongas.org](http://www.radongas.org)

National Radon Safety Board - Radon Proficiency Program, [www.nrsb.org](http://www.nrsb.org)

To be listed by them, an individual must pass a national exam, meet continuing education requirements and follow radon mitigation standards.

INSIST THAT YOUR SYSTEM MEET MITIGATION STANDARDS, to keep the radon as low as possible and minimize operating expenses. The fan must be outside the basement, and the exhaust stack must go up to the roof and be at least 2 feet above any windows less than ten feet away. The exhaust is blowing out 50 cubic feet of air per minute with a radon concentration of several hundred, possibly a thousand pCi/L. If released at the sill of a house, some of this radon can enter the house through openings at the sill plate (where the basement sucks it in), and windows. The average indoor radon can be increased by one pCi/L or more by these effects. Experience shows that the joints and couplings of radon fans tend to leak radon on the high pressure side, significantly reducing the effectiveness of mitigation systems with fans in basements. For a list of mitigation standards see the EPA booklet *Consumers Guide to Radon Reduction*, p. 12, or our web site [www.lowradon.org](http://www.lowradon.org), or call a Wisconsin Regional Radon Information Center toll-free, 888-LOW-RADON (888 569-7236).
